

Dear Daniela Santos,

I would like to send all the collected data about our projects.

I want to apologize you for this delay and thank you for the extending the deadline for us. Unfortunately we are still not able to attach updated photos of Ordrup Dental Clinic. The access to the building was impossible because of the holidays. I will promise to send you the photos via e-mail just as it would be possible.

Thank you for your consideration. In case of any question or queries please do not hesitate to contact us.

Hereby enclosed material from 3 projects:

- JUBII Internetservice domicile lobby 2006
- ORDRUP Health and dental clinic 2007
- Bakkegård dental center 2007

The reason why we have chosen these 3 projects are that they investigate two main themes:

1. The investigation of the counter as a sculptural object in the lobby space.
2. The contrast in materials between natural wood oak tree and artificial materials.

The project moves from making a new lobby space in Jubii to the renovated space of Ordrup and Bakkegård.

The counters of all projects are made with oak tree top as the surface the guest touches and giving the counter as materiality.

As a contrast the front are made in plexiglass where the Jubii front is made like the side of a ship and the front of Ordrup and Bakkegård is tilted in an angle from the top.

The space surrounding the counter is white and kept in simple materials. In Jubii there is concrete floor and steel ceilings. In Ordrup and Bakkegård is white brick wall, wood floor and white ceilings.

The lightning is also made to underline the main space. In Jubii there are panels and the counter is lit up from inside the plexiglass. The lightning in Ordrup and Bakkegård is down light which gives a visual flow through the space.

Enclosed following materials:

Photos from 3 projects.

Plan of Jubii, Ordrup and Bakkegård.

Section through the lobbyspace.

Section through the counter.

Sketches of Søren Robert Lund.

1B

2B

1B, 2B

The main lobby space design into a existing space. The counter is the central, visual fix point in the lobby.

3B

3B.

The counter is made in oak, plexiglass and aluminium.

4B

4B.

The frame is in oak-tree and the plexiglass front is tilted as a contrast to the oak frame.

5B

5B.

Each element in the composition is clearly separate from the others in order to give its own character.

PROJECT:

JUBII HEADQUARTERS (internet service)

Søren Robert Lund Architects has made the prize winning construction in 2001 and the Lobby area was refurbished in 2006.
